MAIN ARTICLES

Talk and Grow Rich

How much do your business partners know about your business? How much do your employees? How much do your clients and customers? Poor communication is one of the most common problems for small and growing enterprises. This may appear quite odd considering that the smaller the firm, the better the shorter the lines of communication should be - as there should be fewer persons to deal with. But really in smaller companies there is often a greater habit of squirreling. Rarely do company co-owners sufficiently confide in one another; senior management often ostracizes the rest of the staff, and clients are often largely in the dark over the status of their business with the company.

Tokenless Two Factor Authentication Ensures Secure Remote Access

Network security requires a solid offensive and defensive strategy that addresses the volatile and dynamic state of internet threats, man-in-the-middle attacks and the ever evolving list of vulnerabilities facing organizations today. The old notion of 'you are only as strong as your weakest link', rings true now more than ever.

As such two factor authentication has become not just a method of security, but truly a requirement for a multi-layered approach to security. Secure remote access that is legitimate without being cumbersome to network users or administrators is a necessity among viable and mobile workforces.

Monkey Management: 3 Simple Management Solutions

Do you ever feel like you are carrying the weight of a thousand people on your back? Somehow no matter how good you think you are at delegating it still feels like you have a thousand things to do. It's a feeling many entrepreneurs, managers and business owners have. William Oncken, author of Management Time: Who's Got the Monkey, calls it "the monkey on your back."

Reaching Out With Enterprise Content Management

Enterprise Content Management uses Internet technologies to make information accessible from all over the world. In an age of global business, this enables employees spread across the globe to maintain effective contacts with their headquarters and also other offices located anywhere in the

world. Internet technologies are used to create an intra-business network, and Intranet, that restricts access to authorized persons. This means that worldwide accessibility is combined with security.

How To Manage The Problem Manager

It is not a rare occurrence to find people in the wrong job or profession. One reason could be that they just love the social attributes of the job. Some are in the job because they have not been able to get anything better. Others may be on a job because it is the "family business", and they feel compelled to follow it. Many others begin a work history with the first job they can get and just stay in that industry forever. Your problem manager is defined as a product of one or a combination of the foregoing motives.
